

Windows Event ID Table for Manual Event Baseline

Jadual rujukan untuk membina baseline event secara manual bagi personal computer / host Windows.

Tujuan: Merekod aktiviti normal komputer seperti logon, failed logon, perubahan akaun, service baharu, firewall/Defender status dan perubahan sistem. Event yang berbeza daripada baseline boleh disiasat sebagai aktiviti mencurigakan.

A. Important Windows Event IDs for Baseline

Category	Event ID	Meaning	Baseline Use / What to Check	Suspicious Indicator
Logon	4624	Successful logon	Kenal pasti login normal: user, masa, logon type.	Login berlaku pada masa luar biasa atau menggunakan logon type tidak dijangka.
Logon	4625	Failed logon	Catat bilangan failed login normal.	Banyak failed login dalam masa singkat; kemungkinan brute force atau salah password berulang.
Logon	4634	User logoff	Padankan aktiviti logon dan logoff biasa.	Logoff tidak sepadan atau sesi login terlalu lama tanpa sebab.
Logon	4648	Logon using explicit credentials	Semak penggunaan credential secara manual.	Credential digunakan oleh proses/aplikasi mencurigakan.
Privilege	4672	Special privileges assigned to new logon	Normal jika akaun admin login.	Admin privilege muncul pada masa pelik atau user tidak sepatutnya admin.
Account	4720	User account created	Catat akaun sedia ada dan perubahan akaun.	Akaun baharu tiba-tiba dibuat tanpa kelulusan.
Account	4726	User account deleted	Pantau deletion akaun.	Akaun dipadam tanpa perubahan rasmi.
Group	4732	User added to local group	Pantau penambahan user ke group seperti Administrators.	User biasa ditambah ke Administrators atau Remote Desktop Users.
Audit Log	1102	Audit log cleared	Sepatutnya jarang atau tidak berlaku.	Log dikosongkan; kemungkinan cubaan menghapus jejak.
Service	7045	New service installed	Baseline service normal yang dipasang.	Service baharu dengan nama/path pelik; boleh menunjukkan persistence malware.
System	6005	Event log service started	Menunjukkan sistem/event log bermula.	Restart tidak dijangka atau berlaku selepas aktiviti mencurigakan.
System	6006	Event log service stopped	Menunjukkan sistem/event log berhenti normal.	Shutdown/restart berlaku tanpa sebab jelas.
System	6008	Unexpected shutdown	Catat kestabilan sistem.	Shutdown mengejut selepas alert keselamatan atau perubahan sistem.
PowerShell	4103	PowerShell module logging	Pantau command PowerShell yang biasa digunakan.	Command mencurigakan seperti download, encoded, bypass, invoke web request.
PowerShell	4104	PowerShell script block logging	Lihat kandungan script PowerShell.	Encoded command, obfuscation, credential dumping atau remote execution.
Defender	1116	Malware detected by Microsoft Defender	Baseline sepatutnya tiada detection.	Malware dikesan; perlu isolate dan scan.
Defender	5007	Defender configuration changed	Pantau perubahan konfigurasi Defender.	Real-time protection/setting keselamatan diubah tanpa sebab.
Firewall	4946	Windows Firewall rule added	Baseline rule firewall normal.	Rule baharu membenarkan port/service tidak diketahui.
Firewall	4947	Windows Firewall rule modified	Pantau perubahan rule firewall.	Rule sedia ada diubah untuk benarkan inbound access.
Firewall	4950	Windows Firewall setting changed	Pantau status firewall.	Firewall dimatikan atau policy dilonggarkan.

B. Useful Sysmon Event IDs for Deeper Host Baseline

Sysmon is **optional**, but useful for cybersecurity labs because it records richer host telemetry such as process creation, network connection, file creation and registry activity.

Sysmon Event ID	Meaning	Baseline Use	Suspicious Indicator
1	Process creation	Senaraikan process normal yang biasa berjalan.	Process pelik, lokasi pelik, command line mencurigakan.
3	Network connection	Kenal pasti destinasi/domain/IP biasa.	Connection keluar ke IP/domain tidak dikenali atau port pelik.
7	Image loaded	Pantau DLL/module yang dimuatkan.	DLL dari folder user/temp atau lokasi tidak biasa.
10	Process access	Pantau proses yang mengakses proses lain.	Process biasa mengakses lsass.exe atau proses keselamatan.
11	File created	Pantau file baharu di lokasi penting.	File executable muncul di Temp, AppData, Startup folder.
12/13/14	Registry activity	Pantau perubahan registry normal.	Run key atau persistence registry berubah.
15	File stream created	Pantau alternate data stream.	ADS digunakan untuk menyembunyikan payload.
22	DNS query	Kenal pasti DNS query normal.	Query ke domain pelik, rawak, atau domain baru dibuat.

C. Manual Baseline Recording Template

Date/Time	Log Source	Event ID	Observed Activity	Normal or Suspicious?	Remarks
17/5/2026 12:38:00 PM	Security	4672	Special privilege assigned to new logon	Normal	Admin privilege untuk user yang login
17/5/2026 12:38:00 PM	Security	4624	Successful logon	Normal	Logon type - kena check dlm Details nanti
17/5/2026 12:18:58 PM	Security	4672	Special Privilege Assigned	Normal	Admin privilege
17/5/2026 12:18:58 PM	Security	4624	Successful logon	Normal	Logon biasa
17/5/2026 12:18:41 PM	Security	4672	Special Privilege Assigned	Normal	Admin privilege
17/5/2026 12:18:41 PM	Security	4624	Successful logon	Normal	Logon biasa
17/5/2026 12:18:12 PM	Security	4634	User Logoff	Normal	Sesi tamat

Suggested student task: Record 10-20 normal events first, then perform safe test activities such as wrong password attempts, opening PowerShell, restarting the computer, or installing a legitimate application. Compare new events against the baseline.
